EDUCATION

AMITY SCHOOL OF ENGINEERING & TECHNOLOGY, AMITY UNIVERSITY HARYANA

Haryana, IN

Bachelor of Technology in Computer Science Engineering [To be completed in June'27]

2023-2027

- **CGPA:** 8.46/10 | **Clubs:** University Digital Club, Nihon Culture Club
- **Leadership:** Member of the Organizing Team of the Mission Veerangana Team for Women's Self-Defence at Amity University Haryana, Former Club Coordinator of the Nihon Culture Club

EXPERIENCE

Amity University Gurgaon | *A leading private research university known for multidisciplinary academic and professional training*

Gurugram, India

Student Intern

September 2025-Present

- Manage backend data workflows and support structured content organisation across institutional platforms, ensuring accuracy, accessibility, and operational efficiency
- Curate and oversee digital content pipelines while contributing to media operations, aligning outputs with institutional communication standards
- Provide on-ground media coverage through photography for academic and extracurricular events, documenting activities with a focus on clarity, composition, and narrative relevance

National Informatics Centre | *The Government of India's premier ICT organisation under the Ministry of Electronics and Information Technology*

New Delhi, India

Cyber Security Intern

June 2025 – July 2025

- Conducted hands-on vulnerability assessments using industry-standard tools, identifying security gaps across systems and networks
- Developed foundational expertise in threat detection, risk analysis, and mitigation strategies within a government cybersecurity framework
- Applied practical knowledge of cybersecurity principles to real-world scenarios, strengthening understanding of secure infrastructure and defensive mechanisms

Embrizon Technologies | *A technology-driven organisation focused on training and development*

Remote

Cyber Security Intern

December 2024 – February 2025

- Completed intensive training in penetration testing, vulnerability assessment, and network security, applying ethical hacking methodologies in simulated environments
- Utilised industry tools and frameworks to identify and exploit system vulnerabilities, reinforcing practical cybersecurity competencies
- Gained hands-on exposure to security protocols and defensive strategies, bridging theoretical knowledge with applied security practices

Prodigy InfoTech | *A technology firm providing hands-on training and development experience in software engineering*

Remote

Web Development Intern

September 2024 – October 2024

- Executed full-stack development tasks, working across frontend and backend layers using HTML, CSS, JavaScript, and integrated systems
- Debugged, optimised, and enhanced web applications, adhering to modern development standards and performance best practices
- Strengthened practical understanding of software development lifecycles, including implementation, testing, and iterative refinement

ACADEMIC PROJECTS

Project SENTINEL (WIP) | *AI-powered network threat intelligence and monitoring platform*

GitHub: <https://github.com/Sid1125/Project-SENTINEL>

- Engineered an end-to-end cybersecurity platform using FastAPI, React, and WebSockets for real-time network discovery, monitoring, and threat analysis
- Integrated ARP scanning and Nmap-based enumeration with a local CVE intelligence engine to identify vulnerabilities across networked devices
- Developed a natural language control layer using local LLMs (Ollama) and NLP pipelines to enable command-driven security operations
- Architected a modular SOC-style system (scanning, intelligence, AI, dashboard) designed for offline-first deployment and extensibility into IDS/IPS and automated defence systems

AgentRecon | *Modular AI-powered reconnaissance and vulnerability analysis pipeline*

GitHub: <https://github.com/Sid1125/AgentRecon>

- Engineered an automated reconnaissance pipeline integrating industry-standard tools including Nmap, Masscan, Nikto, Gobuster, and SSLyze to streamline asset discovery and vulnerability enumeration
- Developed custom modules for CVE enrichment by aggregating threat intelligence from NVD and AlienVault OTX, enabling contextualised vulnerability analysis
- Implemented AI-driven filtering mechanisms to reduce false positives, enhancing signal accuracy and prioritisation in security assessments

F1 Insight Platform | *Full-stack AI-powered analytics and race strategy simulation system*

GitHub: <https://github.com/Sid1125/F1-Insight>

- Engineered a modular analytics platform using FastAPI, Streamlit, and SQLAlchemy to process and visualise Formula 1 telemetry and race data
- Developed predictive models using XGBoost to forecast race outcomes and enable data-driven strategy evaluation
- Built race strategy simulation modules for pit-stop timing and tyre management based on historical performance data
- Integrated an AI-powered natural language interface (OpenAI/Ollama) for querying complex datasets through conversational inputs

HITMEN | *Community-driven moderation and harmful content tracking platform*

GitHub: https://github.com/Sid1125/hitmen_epi_prevention

- Developed a web platform to track and surface accounts flagged for harmful or explicit content, leveraging crowdsourced inputs and structured reporting workflows
- Integrated Discord API to dynamically fetch and update flagged entities, with automated status verification and real-time state transitions (active vs removed)
- Designed a distinctive monochrome UI system using TailwindCSS, optimised for clarity, rapid scanning, and high-engagement interaction
- Architected a decentralised moderation pipeline concept, enabling community participation while maintaining controlled data flow and rate-limited validation mechanisms

AI Research Agent | *LLM-powered RAG system for private document question answering*

GitHub: <https://github.com/Sid1125/Primitive-Research-RAG>

- Engineered a full Retrieval-Augmented Generation (RAG) pipeline for private PDFs, integrating NLTK preprocessing, chunking, and hybrid (dense + TF-IDF) retrieval
- Built and trained a custom Siamese BiLSTM embedding model in Keras to learn semantic similarity across document chunks
- Implemented grounded answer generation using LLMs (Ollama/OpenAI), with extractive fallback to ensure reliability in low-resource settings
- Designed a modular architecture (ingestion, embedding, retrieval, generation) enabling extensibility, evaluation workflows, and local-first deployment

Innovathon Platform | *Full-stack hackathon management and event system*

Deployed Application: <https://innovathon2.onrender.com>

- Engineered a full-stack event platform for a university-level hackathon, featuring structured sections including event overview, sponsors, competition tracks, timelines, and FAQs
- Designed a visually rich, futuristic UI with component-driven layout architecture, optimised for engagement and clear information hierarchy

- Implemented responsive frontend rendering and modular content sections to support scalability and dynamic updates across event lifecycle stages

Website for Office of International Affairs at AUH (WIP) | *International collaboration and university outreach platform*

Deployed Application: <https://global-connect-hub-two.vercel.app/>

- Built a comprehensive web platform for international academic collaboration, featuring program highlights, partner universities, student mobility initiatives, and institutional outreach
- Structured multi-section content architecture (impact metrics, program pillars, testimonials, partnerships) to support information density without compromising usability
- Designed responsive UI components and scalable layout systems to handle diverse content types including cards, grids, and interactive sections

ADDITIONAL INFORMATION

Certifications:

- [Cybersecurity Fundamentals, offered by IBM SkillsBuild](#)
- [Introduction to Cybersecurity, offered by Cisco Networking Academy](#)
- [Fortinet Certified Fundamentals in Cybersecurity, offered by Fortinet](#)
- [Responsive Web Design, offered by freeCodeCamp](#)
- [JavaScript Algorithms and Data Structures \(Basics\), offered by freeCodeCamp](#)
- [Google Cloud Computing Fundamentals and Generative AI Study Jam, offered by Google Cloud](#)

Technical Skills:

- Cybersecurity Tools & Concepts: Foundational understanding of ethical hacking, networking, and Linux systems; applied knowledge of OWASP Top 10, threat modelling, and vulnerability assessment methodologies; hands-on exposure to tools including Wireshark, Burp Suite, Nmap, and Metasploit
- Programming Languages: C, C++, Python
- Web Technologies: MySQL, HTML, CSS, JavaScript, MongoDB (Basics)

Achievements:

- Secured 13th position out of 80 teams in a Capture The Flag (CTF) competition organised by IEEE Computer Society in collaboration with IIT Bombay Trust Lab
- Participated in Smart India Hackathon 2024, contributing to Problem Statement ID SIH1674
- Achieved a 100-day streak on [TryHackMe](#), attaining Rank 200,830 and Level [0x8][HACKER], demonstrating consistency in hands-on cybersecurity practice

Languages:

- English (Native and/or Bilingual Proficiency)
- Hindi (Native and/or Bilingual Proficiency)
- Japanese (Elementary Proficiency)
